Existuje „nekonečná řada“ literárních zdrojů pro medicínské obory, jako příklad jmenujme Publikace fy. Merck, tzv. **Merck-Manuály**, které se dnes vyskytují mnohdy i v internetové či elektronické podobě a které lze prohledávat podle chorob, lékových substancí, metabolických dějů a podobně.

Tuto informaci však vytěžíme a pokud se k ní chceme vrátit musíme si zaznamenat kde, kdy a jak jsme jí získali a co obsahovala.

## Posterior Lobe Disorders

### DIABETES INSIPIDUS (Central Diabetes Insipidus; Vasopressin-Sensitive Diabetes Insipidus)

*A temporary or chronic disorder of the neurohypophyseal system due to deficiency of vasopressin (ADH) and characterized by excretion of excessive quantities of very dilute (but otherwise normal) urine and by excessive thirst.*

**Central or vasopressin (ADH)-sensitive diabetes insipidus**, which is a hypothalamic-pituitary disorder, is referred to in this discussion as diabetes insipidus (DI) to distinguish it from **nephrogenic diabetes insipidus (NDI)**, in which the kidney is ADH-resistant (see [Ch. 229](#)). Polyuria may result from DI (a deficiency of ADH), from NDI, or from compulsive or habitual (psychogenic) water drinking (physiologic suppression of ADH--also termed primary polydipsia or dipsogenic diabetes insipidus).

### Etiology and Pathophysiology

DI may be complete or partial, permanent or temporary. All of the pathologic lesions associated with DI involve the supraoptic and paraventricular nuclei of the hypothalamus or a major portion

## Z39.50

V okamžiku, kdy byl vytvořen standard ANSI/NISO Z39.50, jako jedna z možností sdílení bibliografických informací, se téměř po celém světě staly informace dostupné pro každého, kdo o to projevil kvalifikovaný zájem.

# ZING *Z39.50 International: Next Generation*

V dnešní době o rozvoj tohoto výměnného protokolu pečuje mezinárodní organizace Z39.50 International Maintenance Agency.

## *Biblio Tech* *Review*

*Information Technology for Libraries*

**Z39.50**

Updated: 12 April, 2001

### Z39.50: Part 1- an overview

Obtain a PDF version of this complete Z39.50 2 part article - suitable for printing - for just £15 (\$21.00) Click the Get-a-Copy icon

Národní knihovna ČR byla přidána do katalogu AutoSync systému BookWhere dne **16/2 2004**.

[http://www.nkp.cz/Aleph500/Z39\\_NK\\_cze.htm](http://www.nkp.cz/Aleph500/Z39_NK_cze.htm)

## Konfigurace Z39.50 serveru NK ČR v systému Aleph

Tento dokument se snaží poskytnout všechny informace technické i jiné informace o Z39.50 serveru v Národní knihovně ČR, který byl implementován v prosinci 2000 v systému Aleph.

Z39.50 server systému Aleph respektuje Z39.50-1995 (verzi 3 této normy). Podporována je podmnožina atributů ze sady atributů a kódy bib-1.

### Obsah

#### Basic Z39.50

More technical detail will be given in [part 2 of this article](#). Here, just the basic protocol is outlined in non-technical terms. See also [the animated diagram](#) of the process.

The typical (simplified) search process involved in a Z39.50 session is as follows:

- OPAC user selects Target library (Z-server) from an OPAC menu.
- OPAC user enters search terms
- OPAC software sends search terms and Target library details to a "Z-client" a piece of software usually running as part of the library system.
- Z-client translates the search terms into "Z-speak" and contacts the Target library's Z-server software.
- There is a preliminary negotiation between the Z-client and Z-server to establish the rules for the "Z-Association" between the two systems.
- Z-server translates the "Z-speak" into a search request for the Target library's database and receives a response about numbers of matches etc.
- Z-client receives records
- Records are presented to the OPAC interface for the user.

Reference  
Manager

EndNote

ProCite

WriteNote

Bibliografické programy, jak např. Reference Manager prohledává buď vnitřní (otevřené) databáze, nebo **určené zdroje Internetové** jako tři základní možnosti má:

- ISI Web of Science
- PubMed
- a zdroje Z39.50;

The screenshot shows the EndNote software interface. The main window displays a list of references with columns for Author, Year, Title, Journal, and Ref Type. A red arrow points from the text 'určené zdroje Internetové' to the 'Online Search' section in the left sidebar. The 'Online Search' section includes options like Library of Congress, LISTA (EBSCO), PubMed (NLM), Web of Science (TS), and Web of Science AHCI (T...). Below the list, there is a search panel with fields for Author, Year, and Title, each with a dropdown menu for search criteria (e.g., 'Contains').

**Abstract** A simple method was developed for measuring the paracetamol concentration in human serum by reversed-phase HPLC. The suggested method is sufficiently precise, sensitive, and selective. The time of proper analysis does not exceed 15 min. The linear response of the detector has been proved for the range of 1-80 mg.l(-1) paracetamol

<b>Abstract</b>	Although subacute ascending paralysis without sensory involvement is typically evocative of Guillain-Barre syndrome, it can alternatively be due to infection or inflammation of the spinal cord. We describe a 16-month-old female who presented with ascending flaccid paresis after an upper respiratory tract infection. She then developed signs of upper motor neuron involvement of the lower limbs associated with upper motor neuron involvement of the upper limbs. Motor nerve conduction and electromyographic studies of upper limbs demonstrated anterior horn cell involvement. Neuroimaging was consistent with cervical myelitis, and cerebrospinal fluid polymerase chain reaction was positive for herpesvirus-1. Although association with the primary infection of the respiratory tract may be fortuitous, possible neurotropic or hematogenous spread of herpesvirus-1 to the cervical spinal cord cannot be excluded

Wolters Kluwer

OvidSP

Pokud nemáme před-definovaný přímý export/ import do a z „RIS“ formátu z daného zdroje můžeme:

a/ použít “Tab Delimited” export-import, či  
b/ použít „import filter“.

S oběma musíme, nicméně trochu poexperimentovat..

Při použití **EndNote** máme na paměti:

Technical Support does not support any of these products; nor are we responsible for the filter maintenance and updates. For additional help, please contact the products technical support staff or your local library.

a/ zaznamenejte své citace,

b/ otevřete stranu [EndNote Import Filters](#), zvolte odpovídající CSA filtr pravým tlačítkem myši kliknutím na FTP link a zvolte „Save Target As“,

c/ zaznamenejte soubor jako dokument formátu .enf,

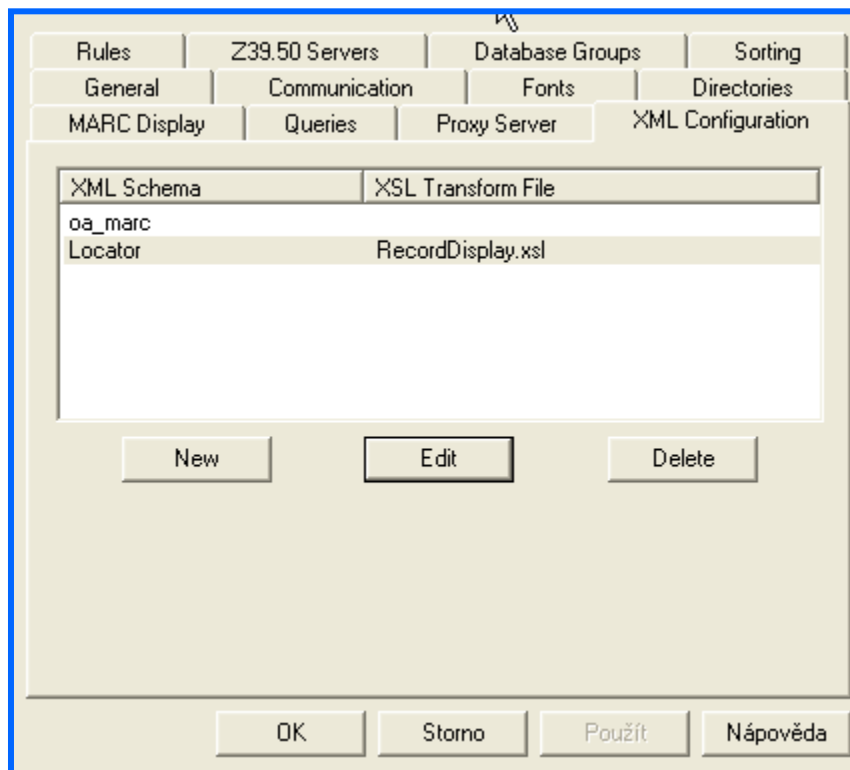

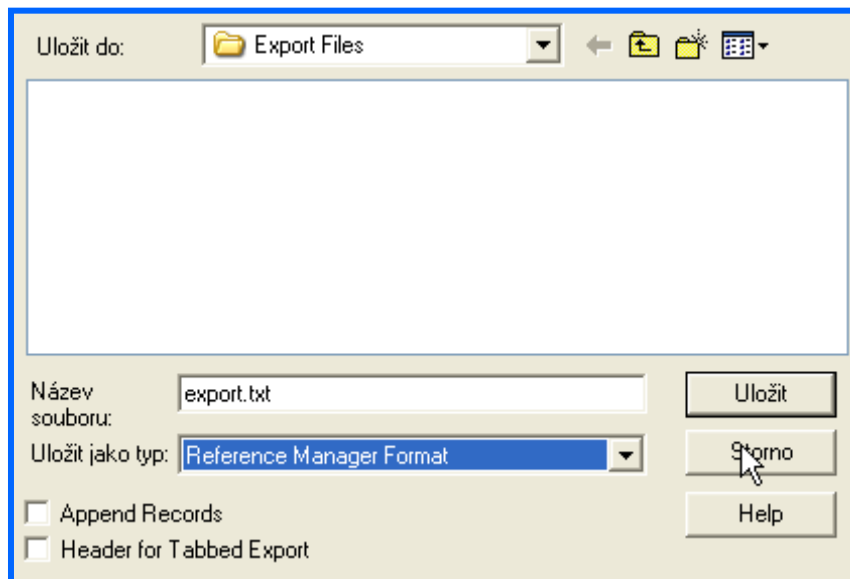

d/ v prostředí **EndNote**, zvolte „Import from the File menu“, a pak vyberte soubor CSA, který jste zapsali i dopovídající CSA filt. Klikněte na tlačítko „Import“ a vaše citace budou downloadovány do databáze **EndNote**.

V bibliografických programech můžeme zaznamenat vyhledané informace ve formátu daného programu, ale také ve formátu programu, který je dostatečně znám.

Můžeme doplňovat již vytvořený soubor (append).

Můžeme vytvářet a doplňovat i soubory HTML či XML a podobně, které pak přímo exportujeme na webový server.

XML skript je zevnitř programu přesně definovatelný.

Srovnání vlastností bibliografických programů

Vlastnost \ Program	EndNote	Reference Manager	ProCite	WriteNote
Internetové hledání	ANO	ANO	ANO	ANO

Přístup k otevřeným URL	ANO	ANO	NE	NE
Práce s kody UNICODE	ANO	NE	NE	ANO

## Connection Files

Connection files contain all the information necessary for EndNote to open, search, and import references from a remote database. If you don't see a particular database or library catalog listed, please contact the information provider or your librarian to inquire if the database is z39.50 compliant (this is required to use EndNote's connection files).

By clicking on the Filtering Options tab below you can select Connection Files by the category (e.g. University) that most interests you. If you have trouble downloading the file you need, you can view an alphabetical listing of all available files and download them via FTP at our FTP site: [Mac](#) / [Windows](#)

Všechny výše uvedené programy se mohou stát vnitřním nástrojem editoru MS Word:

The image shows a screenshot of Microsoft Word with the EndNote integration menu open. The menu items are:

- Insert Citation...
- Insert Marked Reference(s)
- Instant Formatting...
- Generate Bibliography...
- Edit Citation(s)...
- Insert Note...
- Edit Database Reference(s)
- Revert to Original Text
- Remove Field Codes
- Cite While You Write Preferences...
- Help

The EndNote logo is visible in the top right corner. A help window titled "The Cite While You Write Commands" is open on the right, providing descriptions for the commands:

**The Cite While You Write Commands**

These are very brief descriptions of the Cite While You Write commands:

- Insert Citation**—Allows you to enter identifying text to locate, match, and cite one or more references in your database.
- Insert Marked References**: Inserts the references marked in the active Reference List tab in Reference Manager as unformatted citations.
- Generate Bibliography**: This command formats (or reformats) your paper according to the rules of the selected style. The formatting process replaces the temporary citations in your paper with formatted citations, and builds a bibliography at the end of the document.

By default, Instant Formatting is turned on, so your citations and bibliography are automatically formatted as you work.

- Edit Citations**: This command displays the Edit Citation dialog box, where you can edit existing individual or multiple citations. You can omit author and/or year from citations, or add prefix or suffix text (such as page numbers) to citations.
- Insert Note**: Use the Insert Note dialog box to add custom text citations to your Word document.
- Edit Database Reference(s)**: Select citations in your Word document, then choose this command to directly edit the corresponding references in Reference Manager.
- Revert to Original Text**: Converts formatted or unformatted citations back to the original identifying text you entered.
- Remove Field Codes**: Use this item to save a copy of your document without formatted Cite While You Write field codes. Formatted citations and the bibliography are saved as text.
- Cite While You Write Preferences**: Use the Preferences dialog box to change general Cite While You Write preferences and the Reference Manager keyboard shortcuts displayed on the Tools menu in Word.
- Help**: Displays help specific to inserting citations and generating bibliographies in Word.

Jejich funkci lze opět snadno ověřit v praxi plnou třicetidenní licenci, která je k dispozici zdarma:

Zmíněné nástroje umožňují efektivní práci s údaji z literatury, jejich citování v psaných dokumentech, vytváření uživatelských databází a sdílení těchto dat mezi spolupracujícími kolegy i jejich vystavování na webu.

foto Greg Lasley

Děkuji za pozornost

Pokud si někdo vzpomene později a bude mít dotaz: [drasar@telecom.cz](mailto:drasar@telecom.cz)

abstrakt:

## **Bibliografické údaje ve zdravotnictví a jejich získávání, použití a tvorba databází v přímém spojení s knihovnami a literárními zdroji ve světě internetu**

Prof. RNDr. Pavel Drašar, DSc.

*Vysoká škola chemicko-technologická v Praze, Technická 5, 166 28 Praha 6 a*

*SciTech sro, Nad Šárkou 75, 160 00 Praha 6, E-mail: [drasar@telecom.cz](mailto:drasar@telecom.cz)*

Současné možnosti získávání dat z odborné literatury jsou umocněny tím, že ke klasickému portálu Entrez, který integrovaně zpřístupňuje otevřenou politikou NCBI řadu databází jako PubMed, Nucleotide and Protein Sequences, Protein Structures, Complete Genomes, Taxonomy a další, přibyla nedávno podobná iniciativa PubChem, která poskytuje informace o biologické aktivitě malých molekul. Jde o složku projektu NIH „Molecular Libraries Roadmap Initiative“. Pouze samotná PubMed zpřístupňuje údaje a často i přístup k originálnímu článku pro 16 milionů citací z MEDLINE a dalších časopisů z oboru „life science“ od roku 1950. Tyto možnosti dále rozšiřuje v řadě institucí m.j. i snadný přístup do databází ISI Web of Knowledge, která obsahuje přes 26 mil. článků, a ScienceDirect, která obsahuje přes 25 % informačních zdrojů z oblasti vědy, techniky a medicíny s možností přístupu k více než 2000 časopisům (což reprezentuje 6,75 milionu článků). S takovým množstvím informací nelze efektivně pracovat bez efektivních nástrojů, mezi které počítám programy umožňující tvorbu uživatelských databází bibliografických údajů jako jsou RefMan, EndNote a ProCite (ISI Thomson), které umožňují v nejběžnějších případech přímé spojení s bibliografickými databázemi a knihovnami (ISI Web of Science, databáze Ovid, PubMed, Library of Congress, anebo univerzitní katalogy, pomocí metodiky Z39.50) na světě tak, že uživatel může z libovolného připojení k internetu tyto zdroje prohledávat a podle svých licenčních oprávnění z nich i údaje čerpat. Lékař či vědec je pak přímo informován standardním způsobem tak, jak by to v kulturním světě mělo být samozřejmé; navíc, informace, které považuje za důležité vloží do databáze ve svém počítači a později je použije např. přímo z prostředí textového editoru jako např. MS Word nebo WordPerfect.
